1 Foreword

This operator's manual contains information and procedures for the safe operation and maintenance of your Wacker Neuson machine. In the interest of your own safety and to prevent accidents, you should carefully read through the safety information, familiarize yourself with it and observe it at all times.

This operator's manual is not a manual for extensive maintenance and repair work. Such work should be carried out by Wacker Neuson service or authorized specialists.

The safety of the operator was one of the most important aspects taken into consideration when this machine was designed. Nevertheless, improper use or incorrect maintenance can pose a risk. Please operate and maintain your Wacker Neuson machine in accordance with the instructions in this operator's manual. Your reward will be troublefree operation and a high degree of availability.

Defective machine parts must be replaced immediately!
Please contact your Wacker Neuson representative if you have any questions concerning operation or maintenance.

All rights reserved, especially reproduction and distribution rights.
Copyright 2011 Wacker Neuson SE

No part of this publication may be reproduced in any form or by any means, electronic or mechanical, including photocopying, without the expressed written permission of Wacker Neuson.
Any type of reproduction, distribution or storage on data media of any type and form not authorized by Wacker Neuson represents an infringement of copyright and will be prosecuted.
We expressly reserve the right to make technical modifications – even without special notice – which aim at further improving our machines or their safety standards.
2 Introduction

2.1 Means of representation for this operator's manual

Warning symbols

This operator’s manual contains safety information of the categories: DANGER, WARNING, CAUTION, NOTICE. They should be followed to prevent danger to life and limb of the operator or damage to equipment and exclude improper service.

DANGER
This warning notice indicates immediate hazards that result in serious injury or even death.
► Danger can be avoided by the following the actions mentioned.

WARNING
This warning notice indicates possible hazards that can result in serious injury or even death.
► Danger can be avoided by the following the actions mentioned.

CAUTION
This warning notice indicates possible hazards that can result in minor injury.
► Danger can be avoided by the following the actions mentioned.

NOTICE
This warning notice indicates possible hazards that can result in material damage.
► Danger can be avoided by the following the actions mentioned.

Notes

Note: Complementary information will be displayed here.

Instructions

► This symbol indicates there is something for you to do.
1. Numbered instructions indicate that you have to carry out something in a defined sequence.
■ This symbol is used for lists.
2.2 Wacker Neuson representative

Depending on your country, your Wacker Neuson representative is your Wacker Neuson service, your Wacker Neuson affiliate or your Wacker Neuson dealer. You can find the addresses in the Internet at www.wackerneuson.com. The address of the manufacturer is located at the beginning of this operator's manual.

2.3 Described machine parts

This operator's manual is valid for different machine parts from a product range. Therefore some figures can differ from the actual appearance of your machine. It is also possible that the descriptions include components which are not a part of your machine.

Details for the described machine types can be found in the chapter *Technical Data*.

2.4 Identification of the machine

Nameplate position

<table>
<thead>
<tr>
<th>Item</th>
<th>Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Nameplate</td>
</tr>
</tbody>
</table>
Nameplate data

The nameplate lists information that uniquely identifies your machine. This information is needed to order spare parts and when requesting additional technical information.

▶ Enter the information of your machine into the following table:

<table>

</tr>
</tbody>
</table>
3  Safety

3.1  Principle

State of the art

This machine has been constructed with state-of-the-art technology according to
the recognized rules of safety. Nevertheless, when used improperly, dangers to
the life and limb of the operator or to third persons or damage to the machine or
other materials cannot be excluded.

Proper use

The machine may only be used for compacting fresh concrete. The vibrator head
has to be immersed in the fresh concrete.
The vibrator head may not be immersed into acidic or alkaline liquids.
The vibrator head may not come into contact with or be inserted into parts of the
body.
Its proper use also includes the observance of all instructions contained in this
operator's manual as well as complying with the required service and mainte-
nance instructions.
Any other use is regarded as improper. Any damage resulting from improper use
will void the warranty and the liability on behalf of the manufacturer. The operator
assumes full responsibility.

Structural modifications

Never attempt to modify the machine without the written permission of the man-
ufacturer. To do so will endanger your safety and the safety of other people! In
addition, this will void the warranty and the liability on behalf of the manufacturer.
Especially the following are cases of structural modifications:

- Opening the machine and the permanent removal of components from
  Wacker Neuson.
- Installing new components which are not from Wacker Neuson and not equiv-
  alent to the original parts in design and quality.
- Installation of accessories which are not from Wacker Neuson.
It is no problem to install spare parts from Wacker Neuson.
It is no problem to install accessories that are available in the Wacker Neuson
product range of your machine. Please refer to the installation regulations in this
operator's manual.

Do not drill into the housing, e.g. to install signs. Water could penetrate the hous-
ing and damage the machine.
3 Safety

Requirements for operation
The ability to operate the machine safely requires:

- Proper transport, storage and setup.
- Careful operation.
- Careful service and maintenance.

Operation
Operate the machine only as intended and only when in proper working condition.
Operate the machine in a safety-conscious manner with all safety devices attached and enabled. Do not modify or disable any safety devices.
Before starting operation, check that all control and safety devices are functioning properly.
Never operate the machine in a potentially explosive environment.

Supervision
Never leave the machine running unattended!

Maintenance
Regular maintenance work is required in order for the machine to operate properly and reliably over time. Failure to perform adequate maintenance reduces the safety of the machine.

- Strictly observe the prescribed maintenance intervals.
- Do not use the machine if it requires maintenance or repairs.

Malfunctions
If you detect a malfunction, you must shut down and secure the machine immediately.
Eliminate the malfunctions that impair safety immediately!
Have damaged or defective components replaced immediately!
For further information, refer to chapter Troubleshooting.

Spare parts, accessories
Use only spare parts from Wacker Neuson or such that are equivalent to the original parts in design and quality.
Only use accessories from Wacker Neuson.
Non-compliance will exempt the manufacturer from all liability.
Exclusion of liability

Wacker Neuson will refuse to accept liability for injuries to persons or for damage to materials in the following cases:
- Structural modifications.
- Improper use.
- Failure to comply with this operator's manual.
- Improper handling.
- Using of spare parts which are not from Wacker Neuson and not equivalent to the original parts in design and quality.
- Using of accessories which are not from Wacker Neuson.

Operator's manual

Always keep the operator's manual near the machine or near the worksite for quick reference.

If you have misplaced the operator's manual or require an additional copy, contact your Wacker Neuson representative or download the operator's manual from the Internet (www.wackerneuson.com).

Always hand over this operator's manual to other operators or to the future owner of the machine.

Country-specific regulations

Observe the country-specific regulations, standards and guidelines in reference to accident prevention and environmental safety, for example those pertaining to hazardous materials and wearing protective gear.

Complement the operator's manual with additional instructions taking into account the operational, regulatory, national or generally applicable safety guidelines.

Operator's controls

Always keep the operator's controls of the machine dry, clean and free of oil or grease.

Operating elements such as ON/OFF switch, gas handles etc. may not be locked, manipulated or changed without authorization.

Checking for signs of damage

Inspect the machine when it is switched off for any signs of damage at least once per work shift.

Do not operate the machine if there is visible damage or defects.

Have any damage or defects eliminated immediately.
3 Safety

3.2 Qualification of the operating personnel

Operator qualifications

Only trained personnel are permitted to start and operate the machine. The following rules also apply:

- You are physically and mentally fit.
- You have received instruction on how to independently operate the machine.
- You have received instruction in the proper use of the machine.
- You are familiar with required safety devices.
- You are authorized to start machines and systems in accordance with the standards governing safety.
- Your company or the operator has assigned you to work independently with this machine.

Incorrect operation

Incorrect operation or misuse by untrained personnel can endanger the health and safety of the operator or third persons and also cause machine and material damage.

Operating company responsibilities

The operating company must make the operator's manual available to the operator and ensure that the operator has read and understood it.

Work recommendations

Please observe the recommendations below:

- Work only if you are in a good physical condition.
- Work attentively, particularly as you finish.
- Do not operate the machine when you are tired.
- Carry out all work calmly, circumspectly and carefully.
- Never operate the machine under the influence of alcohol, drugs or medication. This can impair your vision, reactions and your judgment.
- Work in a manner that does not endanger others.
- Ensure that no persons or animals are within the danger zone.
3.3 Protective gear

Work clothing
Clothing should be appropriate, i.e. should be close-fitting but not restrict your movement.
When on construction sites, do not wear long hair loosely, loose clothing or jewelry including rings. These objects can easily get caught or be drawn in by moving machine parts.
Only wear clothing made of material that is not easily flammable.

Personal protective gear
Wear personal protective gear to avoid injuries or health hazards:
- Non-skid, hard-toed shoes.
- Work gloves made of durable material.
- Overalls made of durable material.
- Hard hat.
- Ear protection.

Ear protection
This machine generates noise that exceeds the country-specific permissible noise levels (individual rating level). It may therefore be necessary to wear ear protection. You can find the exact value in the chapter Technical Data.
When wearing ear protection while working, you must pay attention and exercise caution because your hearing is limited, e.g. in case someone screams or a signal tone sounds.
Wacker Neuson recommends that you always wear ear protection.

3.4 Transport

Switching off the machine
Before you transport the machine, switch it off and pull the plug out of the plug receptacle. Allow the motor to cool down.

Transporting the machine
Secure the machine on the transport device against tilting, falling or slipping.
3 Safety

Lifting the machine
A falling machine can cause serious injuries.
The machine has no lifting or lashing points.
When lifting the machine, secure it in a closed transport container or similar in order to prevent it from toppling, falling or slipping away.

Restarting
Machines, machine parts, accessories or tools that were detached for transport purposes must be re-mounted and fastened before restarting.
Only operate in accordance with the operating instructions.

3.5 Operating safety

Explosible environment
Never operate the machine in a potentially explosive environment.

Work environment
Familiarize yourself with your work environment before you start work. This includes e.g. the following items:
- Obstacles in the work and traffic area.
- Load-bearing capacity of the ground.
- The measures needed to cordon off the construction site from public traffic in particular.
- The measures needed to secure walls and ceilings.
- Options available in the event of an accident.

Starting the machine
Observe the safety information and warning notices located on the machine and in the operator's manual.
Never attempt to start a machine that requires maintenance or repairs.
Start the machine as described in the operator's manual.
Avoid body contact with grounded components.

Vertical stability
Always make sure that you stand firmly when working with the machine. This applies particularly when working on scaffoldings, ladders, uneven or slippery floors etc.
Caution with hot parts
Do not touch the hot vibrator head during or shortly after operation. The vibrator head can become very hot and can cause severe burns.

Caution with movable parts
Keep your hands, feet and loose clothing away from moving or rotating machine parts. Parts of your body being pulled in or crushed can cause serious injuries.

Do not use components of the machine for climbing on or holding onto
Never use the protective hose, power cable or other components of the machine for climbing on or holding onto.

Switching off the machine
Switch off the machine and pull the plug out of the plug receptacle in the following situations:
- Before breaks.
- If you are not using the machine.
Before storing the machine, wait until it has completely stopped running.
Store the machine or put it down in such a way that it cannot tilt, fall down or slip.

Storage
Set the machine down or store it securely so that it cannot tilt, fall down or slip.

Storage location
After operation, allow the machine to cool and then store it in a sealed-off, clean and dry location protected against frost and inaccessible to children.

Vibrations
When manually operated machines are intensively used, long-term damage caused by vibrations cannot be precluded.
Observe the relevant legal instructions and guidelines to minimize vibration stress.
Details on vibration stress associated with the machine can be found in the chapter Technical Data.
3.6 Safety during the operation of hand machines

Setting the hand machine down properly
Set the machine down carefully. Do not drop the machine to the floor or from greater heights. Dropping the machine can cause injuries to other persons or the machine itself can be damaged.

Safe working with hand machines
While working, always hold the machine on the handle provided.

3.7 Safety during the operation of electric appliances

Specific regulations for electrical appliances
Observe the safety information provided in the brochure General Safety Rules which is included in the scope of delivery of your machine.
Also observe the country-specific regulations, standards and guidelines in reference to accident prevention in connection with electrical equipment and machines.

⚠️ WARNING Read all safety information and instructions. Failure to follow the safety information and instructions may result in electric shock, fire and/or serious injury.

Save all safety information and instructions for future reference.
**Electric power supply for electrical appliances of class rating I**

**Note:** The rated voltage is indicated on the nameplate of your machine.

The machine must be connected to a 15 A/16 A shock-proof plug receptacle (continental type) with a corresponding overload protection.

One of the following fault current protective switches is required:

- Standard fault current protective switch (AC sensitive, Type A).
- AC/DC sensitive fault current protective switch (Type B).

The machine may only be connected to an electric power supply with all machine parts in proper working condition. Take special notice of the following components:

- Plug.
- Power cable over the entire length.
- Switch diaphragm of the ON/OFF switch, if there is one.
- Plug receptacles.

The machine may only be connected to an electric power supply whereby the connector of the grounded conductor (PE) is intact.

There must be at least one of the following safety devices if connected to a stationary or mobile generator:

- Fault current protective switch.
- Isolation (earth leakage) monitor.
- IT-net.

If you connect your machine to a worksite distribution board, the worksite distribution board must be grounded.

**Note:** Observe the respective national safety regulations!
3 Safety

Extension cable
The machine may only be operated with undamaged and tested extension cables!
Only use extension cables with grounded conductor and correct connection of the grounded conductor to the plug and coupling (only for machines of class rating I, see chapter Technical data).
Only use tested extension cables which are suitable for use at construction sites: Average rubber hose H05RN-F or better – Wacker Neuson recommends H07RN-F, an SOW cable, or a country-specific equivalent design.
Immediately replace damaged extension cables (e.g. tears in the sheathing) or loose plugs and couplings.
Cable drums and multiple plug receptacles must fulfill the same requirements as the extension cable.
Protect extension cables, multiple plug receptacles, cable drums and connection couplings against rain, snow or any other forms of moisture.

Uncoil the cable drum completely
Danger of fire due to wound cable drum.
Uncoil the cable drum completely before operation.

Protecting the power cable
Do not use the power cable to pull or lift the machine.
Do not unplug the power cable by pulling on the cable.
Protect the power cable from heat, oil and sharp edges.
If the power cable is damaged or the plug is loose, have it replaced immediately by your Wacker Neuson representative.

Protecting the protective hose
- Do not drag the protective hose over sharp edges.
- If the vibrator head jams in the reinforcement, do not pull out the protective hose suddenly or violently. Free the vibrator head by carefully moving it back and forth.

3.8 Maintenance

Maintenance work
Service and maintenance work must only be carried out to the extent described in these operating instructions. All other procedures must be performed by your Wacker Neuson representative.
For further information, refer to chapter Maintenance.
Disconnecting the machine from the electric power supply
Before carrying out service or maintenance work, pull the plug out of the plug receptacle in order to disconnect the machine from the electric power supply.

Cleaning
Always keep the machine clean and be sure to clean it each time you have finished using it.
Do not use gasoline or solvents. Danger of explosion!
Do not use high pressure washers. Permeating water can damage the machine. When electrical equipment is present, this can pose a serious injury risk from electric shocks.
3.9 Safety and information labels

Your machine has adhesive labels containing the most important instructions and safety information.

- Make sure that all the labels are kept legible.
- Replace any missing or illegible labels.

The item numbers for the labels are in the parts book.

<table>
<thead>
<tr>
<th>Item</th>
<th>Label</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1    | ![Warning label](image) | - Warning! Risk of electrocution.  
- Do not open housing.  
- Read the operator's manual. |

4 Scope of delivery

The internal vibrator is delivered completely mounted.
The scope of delivery includes:

- Machine.
- Operator's manual.
- Parts book.
- General safety instructions.
5 Description

5.1 Application

Use the machine only as intended, see chapter Safety, Proper use.

IRSE-FU laser

The machine has a shorter protective hose to compact fresh concrete on even surfaces.

5.2 Functionality

Principle

The machine is an internal vibrator which creates high-frequency vibrations in the vibrator head.

Concrete is deaerated and compressed in the effective range of the vibrator head when the vibrator head is immersed into the fresh concrete.

The fresh concrete is simultaneously cooling the vibrator head.

Note: The concrete is being compressed for as long as bubbles of air arise.

Bodyguard ®

The Bodyguard ® connects the power supply with the inverter and monitors the incoming and outgoing operating currents. The Bodyguard ® is designed to protect the operator.

If the machine is correctly connected and if there are no dangerous leakage currents, the status LED lights green.

If there is a leakage current within the machine, the status LED lights red. In this case the electric power supply from the mains is interrupted and the inverter is inhibited. The machine does not work.

Note: The machine works only in combination with the Bodyguard ®.
Thermal overload switch
The machine is protected against overheating. In the case of overheating, the machine will automatically be deactivated.

Inverter
The inverter comprises a current rectifier and a d.c.-a.c. converter monitored by an electronic control.

The current rectifier converts the input voltage (AC single phase) to DC voltage.
The d.c.-a.c. converter converts the generated DC voltage to three phase current (AC three phase).

When the machine is switched on, the control electronics provides a soft start and thus prevents critical starting currents.

Vibrator head
In the vibrator head, an electric motor drives an eccentric weight at approx. 12,000 rpm (200 Hz) and thus generates precessions. By these precessions the vibrator head introduces vibrations into the concrete.
5.3 Components and operator's controls

6 Transport

**WARNING**
Improper handling can result in injury or serious material damage.
► Read and follow all safety information of this operator's manual, see chapter Safety.

**WARNING**
Hot vibrator head.
Touching it can cause burns.
► Only touch the vibrator head once the engine has cooled down.
► Wear protective gloves.

Transporting the machine
1. Switch off the machine via the ON/OFF switch.
2. Wait until the machine has come to a complete standstill.
3. Pull the plug from the plug receptacle.
4. Place the machine on or into a suitable means of transport.
5. Roll up the power cable and the protective hose.
   **Note:** Do not kink the protective hose and power cable.
6. Secure the machine against falling or sliding.
7 Use and operation

WARNING
Improper handling can result in injury or serious material damage.
- Read and follow all safety information of this operator's manual, see chapter Safety.

7.1 Prior to starting the machine

After unpacking, the machine is ready for operation.

Checking the machine
- Check the machine and all components for damages.
- Damage to the protective hose and the power cable.

Checking the mains
- Check if mains or power distribution on the construction site have the correct operating voltage (see nameplate of the machine or chapter Technical Data).
- Check if mains or power distribution on the constructions site are protected in accordance with current standards and regulations.
7.2 Starting up

**WARNING**
Damaged insulation.
Danger of electrocution!
- Do not kink or damage the protective hose and power cable.

Connecting the machine to the electric power supply

**Note:** The machine may only be connected to AC single phase, connection values see chapter *Technical Data*.

**NOTICE**
Electrical voltage.
Incorrect voltage can cause damage on the machine.
- Check if the voltage of the current source corresponds with the information of the machine, see chapter *Technical Data*.

**WARNING**
Starting of the machine.
Danger of injuries from uncontrolled starting of the machine.
- Deactivate the machine before connection to the electric power supply.

1. Switch off the machine via the ON/OFF switch.

**WARNING**
Electrical voltage.
Injuries from electrocution.
- Check power cable and extension cable for signs of damage.
- Only use extension cables for which grounded conductors are connected to the plug and the coupling (only for machines of class rating I, see chapter *Technical Data*).

2. If required, connect the machine to a permitted extension cable.
   **Note:** See chapter *Technical data* for the permitted lengths and cross-section areas of extension cables.

3. Insert the plug into the plug receptacle.
   If the machine is correctly connected and if there are no dangerous leakage currents, the control lamp on the Bodyguard® lights green.
Switching on the machine

1. Use the handle to pick up the machine.
2. Switch on the inverter via the ON/OFF switch of the inverter.
3. Switch on the machine via the ON/OFF switch on the handle.

If the machine is ready for operation, the control lamp on the inverter lights green.

</tbody>
</table>
Compacting fresh concrete

1. Hold the machine only on the handle.
2. Quickly immerse the vibrator head in the fresh concrete, hold it for several seconds and slowly pull it out again.
3. Immerse the vibrator head in all areas of the formwork and compact the fresh concrete.

Note:
- Compact especially intensively in the area of formwork corners. In these areas, the reinforcement rate is the highest.
- Avoid contact of the vibrator head with the concrete reinforcement. The following damages are possible if the vibrator head comes into contact with the concrete reinforcement:
  - The connection of the concrete to the reinforcement can be lost.
  - The machine can be damaged.
- The result of the compacting depends on the following points:
  - Holding time of the vibrator head in the concrete.
  - Diameter of the vibrator head.
  - Consistency of the concrete.
  - Reinforcement rate.

If you use a vibrator head with a smaller diameter, the compacting time to achieve the same results as with a vibrator head with a larger diameter will increase.

- Indications that the concrete is sufficiently compacted:
  - The concrete no longer sets.
  - Air bubbles no longer or rarely rise.
  - The sound of the vibrator head is not changing anymore.
7.3 Decommissioning

Switching off the machine

**CAUTION**
The vibrator head moves if it is turned on and not immersed in the fresh concrete.
Danger of injury or danger of damage to property by uncontrolled vibrator head.

- Switch the machine off before you put it down.

---

**CAUTION**
The vibrator head heats up if it is turned on and not immersed in the fresh concrete.
Hot surface can cause burns.
Damage to the machine with excessive wear.

- Do not operate the machine with the internal vibrator not immersed in the fresh concrete.

1. Slowly remove the machine from the fresh concrete; hold the vibrator head in the air.
2. Switch off the machine via the ON/OFF switch.
3. Wait until the machine has come to a complete standstill.
4. Put down the machine slowly.
   **Note:** Do not kink the protective hose and power cable.
5. Pull the plug from the plug receptacle.

7.4 Cleaning

Cleaning the machine

- Clean the machine and all components with water after each use.

**Note:** You can remove concrete residuals by immersing the running machine into gravel.
8 Maintenance

WARNING
Improper handling can result in injury or serious material damage.
- Read and follow all safety instructions of this operator's manual, see chapter Safety information.

WARNING
Improper handling may cause a danger to life by electrocution.
- Only a qualified electrician is permitted to open the machine, perform repairs, and perform a subsequent safety check in accordance with applicable regulations.

8.1 Maintenance personnel qualifications

Qualifications for maintenance work
The maintenance tasks described in this operator's manual may be performed by any responsible user unless otherwise stated.
Some maintenance tasks may only be performed by specially trained personnel or by the service staff of your Wacker Neuson contact — these are specifically noted.

8.2 Maintenance schedule

Note: The time intervals mentioned here are reference values for normal operation. For extreme operation, e.g. continuous use, the service intervals should be halved.

<table>
<thead>
<tr>
<th>Task</th>
<th>Daily before operation</th>
<th>Every 100 hrs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visual inspection of all parts for damage.</td>
<td>■</td>
<td></td>
</tr>
<tr>
<td>Check the wear dimensions.</td>
<td>■</td>
<td></td>
</tr>
<tr>
<td>Change oil in vibrator head (not for IRSE-FU 30).*</td>
<td>■</td>
<td>■</td>
</tr>
</tbody>
</table>

* Have these tasks carried out by the service department of your Wacker Neuson representative person.
8.3 Maintenance work

Work in the workshop

Perform maintenance work in a workshop on a workbench. This has the following benefits:

- Protection of the machine of contamination on the construction site.
- A level and clean work surface makes work easier.
- There is a better overview over small parts and they are not lost as easily.

Visual inspection for damage

WARNING
A damaged machine part, protective hose or power cable can result in personal injury caused by electric current.

- Do not operate a damaged machine.
- Have a damaged machine repaired immediately.

- Check all machine parts and components for damage.
- Check the tightness of the switch diaphragm for the ON/OFF switch.
Checking the wear dimensions of the vibrator head

Wear dimensions:
- Minimum diameter of lower tube \( \varnothing_{LL} \)
- Minimum diameter of vibrator head \( \varnothing_L \)
- Length of vibrator head \( L_L \)

Wear is highest at the end of the vibrator head.

Let the vibrator head be exchanged by your Wacker Neuson contact if the wear dimensions are reached at a certain point.

<table>
<thead>
<tr>

<td>52 (65)</td>
</tr>
</tbody>
</table>

* Vibrator head does not comprise 2 parts.

Dimensions in bold are wear dimensions.
Dimensions in brackets are original dimensions of new machines.

Changing the oil in the vibrator head

Take the machine to your Wacker Neuson contact to change the oil in the vibrator head.

Note: For the vibrator head of \( IR...30 \) the oil cannot be exchanged. The vibrator head must be exchanged from the Wacker Neuson representative.
## Troubleshooting

Please refer to the following tables if the machine does not work properly. They contain potential faults, their causes and remedies.

### 9.1 Bodyguard®

<table>
<thead>
<tr>
<th>Malfunction</th>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| Red LED lights. The line voltage is applied. | - The Bodyguard® has turned off the machine.                           | 1. Pull the plug from the plug receptacle.  
2. Check power cable for damage – if damaged, have it replaced.  
3. Insert the plug into the plug receptacle.  
If the fault is not remedied, have the machine repaired. * |
|                                          | - Machine malfunction.                                                 |                                                                        |
|                                          | - Water in inverter.                                                   | Have the machine repaired. *                                           |
|                                          | - Defect in the vibrator head.                                          |                                                                        |

10 Disposal

10.1 Disposal of waste electrical and electronic equipment

For customers in EU countries

This device is subject to the European Directive 2002/96/EC on waste electrical and electronic equipment (WEEE) and the corresponding national legislation. The WEEE directive outlines the procedure for handling electrical waste equipment across the EU.

The device is labelled with the symbol of a crossed out dustbin shown here. This means you may not dispose of it with normal household waste but in a separate environmentally-friendly waste collection.

This device is a professional electrical tool designed for commercial applications only (B2B device according to WEEE directive). Contrary to equipment used in most private households (B2C devices), in some EU countries such as Germany, this device may not be disposed of at a collection point in a public disposal facility (for example at public waste depots). In case of doubt, ask the sales outlet about the proper disposal procedure for B2B electrical equipment in your country and ensure you dispose of the device in accordance with the valid legal guidelines. Please also note any information in the sales contract and the general terms and conditions from the point of sales.

The proper disposal of this device prevents the occurrence of any negative effects on people or the environment, follows the specific procedures for handling harmful substances and enables valuable raw materials to be recycled.

For customers in non-EU countries

The proper disposal of this device prevents the occurrence of any negative effects on people or the environment, follows the specific procedures for handling harmful substances and enables valuable raw materials to be recycled. Therefore, we recommend that this device is disposed of in a separate, environmentally-friendly waste collection and not with normal household waste. In some cases, national legislation also stipulates the separate disposal of electric and electronic products. Please ensure you dispose of this device in accordance with the valid regulations in your country.

**WARNING**

Electrical voltage.
Injuries from electrocution.

- Check power cable and extension cable for signs of damage.
- Only use extension cables for which grounded conductors are connected to the plug and the coupling (only for machines of class rating I, see chapter *Technical Data*).

- Only use permitted extension cables, see chapter *Safety*.
- Refer to the following table for the required cross-section area of the extension cable:

**Note:** Refer to the nameplate or the chapter *Technical data* (via the item number) for the type designation and voltage rating of your machine.

</tbody>
</table>
Example

You utilize an IRSE-FU 45/120 and want to use an extension cable with a length of 25 m (82 ft).

The machine has an input voltage of 120 V.

According to the table, the extension cable must feature a cross-section area of 2.5 mm² (AWG 12).
Class rating

The class rating according to DIN EN 61140 specifies the safety measures for electrical equipment to avoid electrocution. There are four class ratings:

<table>
<thead>
<tr>
<th>Class rating</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No special protection apart from the basic insulation. No grounded conductor. Plug connection without grounded conductor contact.</td>
</tr>
<tr>
<td>I</td>
<td>Connection of all conductive housing components to the grounded conductor. Plug connection with grounded conductor contact.</td>
</tr>
<tr>
<td>II</td>
<td>Reinforced or double insulation (protective insulation). No connection to the grounded conductor. Plug connection without grounded conductor contact.</td>
</tr>
<tr>
<td>III</td>
<td>Machines are operated on protective low voltage (&lt; 50 V). Connection to the grounded conductor is not necessary. Plug connection without grounded conductor contact.</td>
</tr>
</tbody>
</table>
Protection class IP

The protection class according to DIN EN 60529 indicates the suitability of electrical equipment for use in certain ambient conditions as well as the protection against risks.

The protection class is specified by an IP code according to DIN EN 60529.

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning 1st number: Protection against touching hazardous parts. Protection against permeating foreign objects.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Not protected against contact. Not protected against foreign bodies.</td>
</tr>
<tr>
<td>1</td>
<td>Protected against contact with the back of the hand. Protected against large foreign objects with diameter &gt; 50 mm (1.9 in).</td>
</tr>
<tr>
<td>2</td>
<td>Protected against contact with one finger. Protected against medium-sized foreign objects (diameter &gt; 12.5 mm (0.5 in)).</td>
</tr>
<tr>
<td>3</td>
<td>Protected against touch with a tool (diameter &gt; 2.5 mm (0.01 in)). Protected against small foreign objects with (diameter &gt; 2.5 mm (0.01 in)).</td>
</tr>
<tr>
<td>4</td>
<td>Protected against touch with a wire (diameter &gt; 1 mm (0.03 in)). Protected against granular foreign objects (diameter &gt; 1 mm (0.03 in)).</td>
</tr>
<tr>
<td>5</td>
<td>Protected against contact. Protected against dust depositing inside.</td>
</tr>
<tr>
<td>6</td>
<td>Completely protected against any contact. Protected from dust.</td>
</tr>
</tbody>
</table>

<table>

Preußenstr. 41
80609 München
GERMANY

Production Facility(ies): 64228

Certification Mark:

Product: Handheld electric tools (Concrete vibrators)

Model(s): IRFU 30/120 US; IRSE-FU 30/120 US
IRFU 38/120 US; IRSE-FU 38/120 US
IRFU 45/120 US; IRSE-FU 45/120 US
IRFU 57/120 US; IRFU 57/120 8m US
IRFU 57/120 10m US; IRSE-FU 57/120 US
IRFU 65/120 US; IRFU 65/120 8m US

Parameters:

- Rated voltage: 110-130V ~ 50/60 Hz
- Frequency: IR...30 IR...38 IR...45 IR...57 IR...65
- Rated power: 400W 650W 880W 1100W 1400W
- Rated current: 4.4A 7.0A 9.6A 12.0A 15.0A
- Procted class: I
- Degree of (water) protection: IP 67

Tested according to:

- CAN/CSA-C22.2 NO. 60745-2-12:2005
- UL 60745-2-12:2005

The products are intended and certified for USA and Canada. Additional requirements may apply for other countries.

The product was voluntarily tested according to the relevant safety requirements and mentioned properties. It can be marked with the certification mark shown above. The certification mark must not be altered in any way. See also notes overleaf.

Test report no.: 034-340381-000

Date, 2009-06-04
